Changes for the Better

Ultra-Bright Images, High-Performance Projection

BrightEra. sRGB

New WL6700U XL6600U XL6500U

# Impress your Audience with the High Performance

installation projectors will capture

The Mitsubishi WL6700U . XL6600U and XL6500U the attention of your audience by delivering sharp, bright images with vibrant colors and exception details.

**Ultra-Brightness** 

#### Super bright 6000lm\*

The XL6600U/LU delivers super bright 6000 lumen\* images. A high brightness level for presenting in large meeting rooms and conference halls. \*WL6700U/LU, XL6500U/LU are 5000 lumens.

**Designed for Flexible Installations** 

#### 2-way Mechanical Lens Shift (Vertical & Horizontal)

Lens shift allows images to be shifted both horizontally and vertically, letting you position the projector conveniently anywhere in the room. Additionally, Digital Keystone Correction reduces line distortion by allowing for vertical correction to create a more natural-looking picture even when it is difficult to set up the unit perfectly perpendicular with the screen.

#### **Optional Lenses**

A wide variety of optional lenses is available to suit any operating or user requirement.

#### **Optional Lenses Line-up**

OL-X500FR(F)

\*The CA-XI 6600 (FR) Front Cabinet (sold separately) is required when using the QI -X500FR Bear Projection Short Throw Fix Lens

#### **Versatile Input Terminals**

Equipped with a RJ45 network terminal, administrators can remotely manage their projectors from a web browser via the Local Area Network (LAN). Administrators can check projector status such as lamp usage, change input selections, remotely power on or off, as well as receive email alerts if an error occurs. In addition, these projectors support RS232C standards as well as BNC connectivity for long cable setups with PC or video inputs.

#### **Terminal Cover**

Includes a terminal cover to cover up any visible connectivity cables.

#### Wider Screen Range (WL6700U/LU only)

Whatever the screen you use is, WL6700U/LU can automatically detects the input signal, and display an optimum screen size to either Auto (16:10), Auto (16:9), or Auto (4:3). Users will no longer need to worry about selecting the optional screen size since the projector can automatically detect the signal and select the optimal mode. Also since the WL6700U/LU incorporate a 1366 x 800 WXGA panel, they will support multiple WXGA images -1280 x 768, 1280 x 800, 1360 x 768, 1366 x 768 at its native resolution without compression.

### **Impressive Picture Quality**

#### **Color Enhancer**

Optimum source reproduction is achieved with six different viewing modes: Auto, Presentation, Standard, Theater, sRGB, and User. Depending on the input signal, you can adjust the best color setting on your own.

#### 3D Y/C digital comb filter and 3D noise reduction

The luminance and chrominance (Y/C) signals of images are separated with 3D processing for enhanced brightness. Cross-colorization (rainbow-like noise patterns) and dotcrawl (checkerboard-like noise patterns) are reduced, producing a clear and distinct image.

#### sRGB Mode

Developed to ensure standard, uniform color reproduction regardless of the type of display used, sRGB color profile technology uses independent color coordinates common to all display technologies. As a result, it helps to eliminate hue variations that occur between different display systems and more accurately matches the way colors look.

To find out the details of sRGB, visit us at : http://global.mitsubishielectric. com/bu/projectors/technology/

# Mitsubishi Installation Projectors series

#### Long 4000hrs Lamp Life

Designed with a lamp temperature controlling system, the WL6700U/LU, XL6600U/LU, XL6500U/LU can support a lamp life of up to 4000 hours\*<sup>1</sup>. The long life lamp makes dramatic reductions in overall cost of ownership by decreasing the frequency of lamp replacements.

(\*1): When used in Lamp Low mode. Maximum lamp life at standard mode use is 2,000 hours. (\*2): Lamp life refers to the average time required for brightness to be reduced by half, and not the time specified in the warranty. Use time may vary widely by the environment and conditions, and whether or not cleaning and other maintenance procedures are followed.

#### PJ Link available (Projector control by network LAN)

To monitor and projectors and facilitate maintenance,

PJ Link is a diagnostic system that provides control over key projector functions such as...filter clogging. Being able to remotely manage via a LAN is ideal for administrators to control their projectors from a remote system.

#### High image quality PinP\* (Real Motion)

This innovative technology allows you to show two images (two motion/live images) simultaneously on screen. Images from two different sources (PC and video) can be shown together on the main screen and PIP to double the impact of any presentation. An increase in video processing to

60 frames / sec. provides smoother image transitions and it is also possible to zoom up on the picture.

\*XL6600U/LU, XL6500U/LU, only. Not compatible with the WL6700U/LU.

#### Ultra Quiet 29dBA Operation

Fan noise emanating from a projector can get annoying during a presentation or videoconference, but now that's a thing of the past. The WL6700U/LU, XL6600U/LU, XL6500U/LU offer a significantly low noise level of only 29dBA (low lamp mode). As a result, your audience can enjoy the presentation or conference without noisy distractions from the projector.

#### Split (side-by-side) window function\* brings expression to the next level

The split-screen function of conventional XGA projectors overlap, with the sub-screen in front of the main screen. Our WXGA panels present perfectly parallel split windows, placing two screens side-by-side. When displays are simultaneous and identical in scale, comparative viewing is clear and effective.

#### Anti-Theft Features (password security, motion alarm, screen capture)

Through software, password menus helps lock out access to operation and a customized splash or logo screen can appear when powering

on the projector to thwart would-be burglars. From a hardware standpoint, a motion alarm is built into the cable cover; if an outsider attempts to forcibly remove the projector from its mount, a loud alarm will help drive off the potential thief.

#### Motion alarm

Once the motion alarm is set, unauthorized attempts to remove the projector will cause the alarm to sound. Undetectable externally as it is built-in, the alarm is battery powered and features a "safety pin" that prevents accidental activation during projector maintenance.
