

Leading the Evolution of  
High-Definition Digital Signage

# A Broad Lineup Engineered to Deliver the Ultimate in Visual Expression for Digital Signage and Commercial Applications

Mitsubishi LDT Series LCD Monitors

Photographs are simulated images.

Mitsubishi Electric's LDT series monitors are designed specifically for Public Information Displays & Digital Signage applications. They are available in screen sizes from 32" – 65" with a host of functions, advantages and benefits which can ultimately provide enormous cost savings over the project life-cycle. Benefits are realized in the phases of system design, deployment & installation, operations & monitoring and long-term maintenance & reliability.

# Powerful features and functionality complimented by stunning image quality.

## High Reliability - Engineered specifically for Industrial/Commercial Public Display Applications

Specifically engineered for Public Information Displays and Digital Signage applications. Mitsubishi LDT series monitors employ long-life components and specially selected panel specifications for commercial usage.

## High Grade Panel equipped

The native resolution of 1920x1080 (FHD) employed in 46"/52"/65" models, 1366x768 (WXGA) in 32"/42" models, enable to display precise high-definition images both for Video and PC signals.

\* For LDT461V/521V/651L/P

LDT series also features fast 6ms\* response time for reproducing clear moving-pictures. High contrast and high brightness ensures clear and crisp picture quality.

\* Gray to Gray LDT421V2 : 9ms

Conventional

LDT series

Simulated Image

## Industrial Form Factor with black, 4-sided symmetrical bezel design

Ensures that over time, as units are added or replaced in a given location, the appearance will remain uniform and unobtrusive. Also, the appearance when mounted in portrait position remains symmetrical. All control keys such as power, input selection and picture controls are all neatly concealed under the monitor, not to be visible from the front.

## Flexible Landscape & Portrait positioning

Engineered for heat dissipation and long-term reliability in both Landscape (horizontal) and Portrait (vertical) positions.

\*65" separates in 2 versions.

## Multiple Commercial Input & Output Interfaces/Connectors

Reduced installation costs, connection and input flexibility with future-proofing are assured for a wide variety of signal types. These include: Multiple PC Inputs with D-Sub 15, DVI-D or HDMI, and 5BNC and an output for looping several monitors. For standard video, BNC Video Inputs with Composite, Component and Y/C connections as well as an output for looping several monitors. Audio connectors are also included, as are speaker terminals for direct connection to external speakers.

42" LDT421V2 Input Panels

## Flexible Input Signal Support

- Support for a wide variety of PC signals including VGA, SVGA, XGA, WXGA, SXGA, UXGA, and WUXGA for 46" and larger.
- Support for a wide variety of Video signals including NTSC, PAL, SECAM, 480p, 720p, 1080i, and 1080p for 46" and larger.
- Support for Audio with both PC and Video signals.

## Auto Adjust & Auto Set-up

Automatically adjusts the screen position, phase and clock when the input signal timing is changed. In addition, Auto Set-up\* quickly adjusts more items such as screen size, white & black levels with a single touch via the IR remote control.

\* Only for LDT321V/421V2/461V

## Remote Management & Diagnostics via bi-lateral RS232 communications

Users can create their own user interface loaded on a controlling PC to remotely control or adjust monitors. 42" and larger models can also be daisy chained to save on cabling costs as illustrated below. Daisy chained monitors can be controlled or adjusted all at once. Using a unique ID number, each monitor up to 25 in a daisy-chain can also be controlled individually.

For 42" and 46" models, daisy chain capability also allows control of all daisy chained monitors simultaneously with the IR remote from a single master monitor location saving time on-site.

In addition, critical monitor health status such as input signal, cooling fan\* and internal temperature can also be verified remotely. (The cooling fan will start automatically when the internal temperature rises beyond a certain limit.) Remote asset management is also available to verify model and serial number.

\*Only for LDT321V/421V2/461V

## Programmable Scheduling Function

The Monitor's operating schedule can be programmed for up to 7 different scheduled time intervals by time, day of week and input port. This can allow for content from a different input to be scheduled on certain monitors within the same installation and also to extend the monitor's life and save power by turning it off during those hours or days that it is not required.

## Power Save Function for both PC and Video signals

The monitor can be set to automatically go into power management mode when either the PC signal (RGB sync) or video input signal is lost. This saves both power and the need to individually turn off each monitor when not in use such as during the time when a location is closed.

\* LDT521V/651L/P: For PC signal only

## Multiple Screen-Saver Functions

To reduce image persistence and maximize panel life in demanding signage applications, the LDT series employs 4 different levels of screen saver functions, each of which can be set to meet the requirements of each application.

- An optimized gamma curve mode;
- Setting of the cooling fans to run continuously rather than automatically when the internal temperature reaches a specific level;
- A reduced brightness mode to limit the maximum brightness
- A Motion mode that shifts the image in 4 directions slightly at user selectable time intervals.

\* LDT521V/651L/P: Only Motion mode available

## Tiling Capability with Frame Compensation

This allows for high impact signage with the ability to combine up to 25 monitors\* (up to 5High x 5Wide) to create a single large image (i.e. Video Wall) with compensation for the width of the monitor bezels in order to accurately display the content as a single image.

\* LDT321V/421V2 max 16 screens (4 x 4)

## Multi-screen display of 5 x 5 = 25 screens at maximum

## Long Cable Compensation

Long runs in the RGB signal cable may cause loss in image quality. For this reason, the LDT461V includes a long cable compensation feature which can be turned on during installation and is adjustable for various signal cable distances.

\*Applicable only for analog RGB (D-SUB/BNC)

\*Compensation level depends on the quality of signal source and cable.

## Wide Range Color Temperature Adjustment

This allows for display color temperatures to be adjusted from 3,000K up to 10,000K. This wide range is especially important for industries such as broadcast, retail food and others where color accuracy and flesh tones are critical.

\* Not available on LDT321V

## PiP & PoP

Picture-in-Picture and Picture-out-Picture are available to display content in a window from Video Input source when the main image is from a PC Input source and vice versa. 46" and larger models with their higher 1920 x 1080 native resolution can also display these 2 input sources in a side-by-side mode, ideal in broadcast and video conferencing applications.

## Power-on Delay

For installations employing numerous monitors, the power-on delay functions allow for setting each monitor to power up between 1-50 seconds after the power is applied. This allows the monitors to power up sequentially, avoiding in-rush current problems and reduces the overall electrical load requirements when using the same power supply.

## Side Border Color Select

When 4:3 screen is displayed, side border color can be selected from Black, Gray and White.

\* Only for LDT321V/421V2/461V

## IR Remote Lock

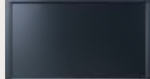

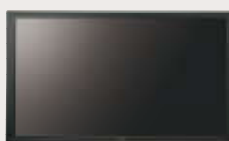

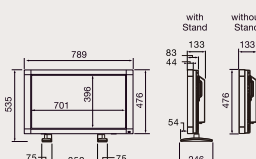

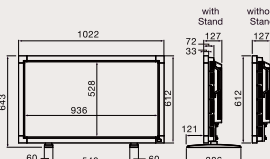

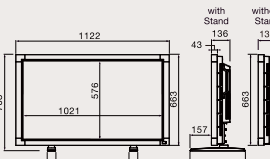

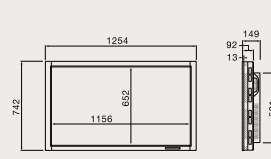

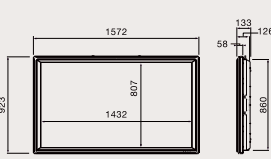

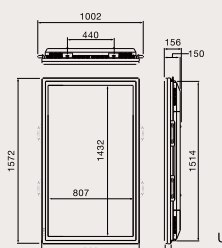

The remote control receiver can be turned off so that no changes can be made to the display settings or selected inputs by unauthorized personnel.

## Removable Bezel

The popular 42" and 46" models have an easily removable front bezel design so that customers can change to other color bezel. (Silver color bezel is available as an option.)
